

Steven W. Pearce, MBA, MPM

CEO, Pearce Sustainability Consulting Group

Proud to be part of the GLAM launch — Global Local AI Mobilization — a movement built on one straightforward idea: the AI powering our future should not cost the Earth to run.

Cloud AI burned 183 terawatt-hours of electricity last year. Every prompt burns power. Every response leaves a carbon trail. GLAM advocates for AI that runs locally — on your device, in your community, under your control. Private by design. Sustainable by necessity. Open source by principle.

The infrastructure choices we make in AI right now will shape our emissions trajectory for decades. This is not a technical problem — it is a political, economic, and ethical one.
